

# Did You Know?

An illustration of a young girl with long, wavy pink hair and freckles. She has a thoughtful expression, with her hand to her chin. To her right, a green asparagus spear is positioned as if it were a fork. The background consists of light blue diagonal stripes and a pattern of small white dots.

When the body digests asparagus it releases a sulfur containing chemical into the kidneys which results in a distinct, sulfurous smell to urine. Some people are not able to detect this smell.
